Bellon

Bellon: thirty years of intense commitment

Bellon is a company that specialises in the design and construction of mowers and mower-conditioners. With over thirty years' experience in the agricultural sector, Bellon sells its products in Italy and all over the world. Always attentive to market requirements, Bellon offers a wide range of high-performance machinery, adapting to all types of soil and crops.

What makes Bellon a successful company is not only the ability to produce quality and innovation but also the fact that it is geared to the future without losing sight of its traditional values: efficiency, dependability and attention to the customer.

We look after your work

Bellon's underlying commitment is to look after its customers and their firms. Relying on its expertise and dependability, the company can focus on the customer, creating not only a business connection but also, and above all, a human relationship.

Bellon works as a partner with its customers to widen its knowledge, comparing experiences and ideas and exchanging information which is beneficial to both customer and supplier.

Bellon's success is measured by the success of its customers, by the recognition and loyalty it obtains from them.

We take up the challenge of the global market

Bellon is a company firmly rooted in its local area but its territorial dimension is no obstacle to a global view of the market. For many years now, Bellon has been exporting its machinery all over the world where it is known for its commitment, the dependability and quality of its products, and its skills and expertise.

DISTRIBUTOR:

Southern Farm Supply, Inc.

P.O. Box 128

- Website: <http://southernfarmsupply.com>

Territories served:

North Carolina, South Carolina, Alabama, Tennessee, Georgia, Florida, Mississippi, Kentucky, West Virginia, Virginia, Pennsylvania, Ohio, Maryland.

A wide range of products to meet many different needs.

TRD6000_{FL}

Pulled type mowers disc line: handiness and lightweight on any ground.

The disc pulled type mowers ensure optimal handling and manoeuvrability, thanks to their low weight. Their lightness and swinging arms, which fit to irregular or undulating grounds, make mowing easier. In the GM version, the different models are equipped with a spiral rubber-roller conditioner (chevron pattern), suitable for grass fodder rich in leaves such as lucerne and clover, which require delicate handling. In the FL version, on the contrary, a flail conditioner is mounted, which allows obtaining a good product from drier fodder like Gramineae.

TRD6000_{GM}

2-drum mechanical mower: efficiency in any conditions.

F170

The mechanical lateral drum mowers F135, F170 and F190 are characterised by their efficiency and dependability in any working condition. Transmission is by means of universal joints, one normal and the other with clutch and free wheel. This range of machines also comprises the series with conditioner. A release mechanism allows the mower to be moved back if an obstacle is encountered. The three-point hitch with reciprocating bar permits constant adaptation to the ground even when uneven or sloping.

Belt drive mower: reliability at all times.

DGL

The lateral disc mowers DL3, DL4, DL5, DL6, DL7, DL8 with belt transmission and without conditioner are suitable for medium-sized farms looking for robust but reasonably-priced equipment for efficient use with tractors on various cutting widths. The wide choice of models covers cutting widths from 1.3 m to 3.2 m, with perfect adaptation to the various workloads. The strength of these machines lies in their ability to combine efficiency and low cost.

The performance you're looking for, the quality you expect.

Bellon designs and produces mowers and mower-conditioners to meet various needs. The range of products is wide and varied and can be grouped basically into three lines: machines with disc, drum or combined cutting system, i.e. with several mowing elements with either disc or drum cutting system. Each of the lines comprises both frontal and lateral machines. Different types of crops can be mown on different types of soil with greater productivity, reducing drying and hay-making times to obtain quality fodder.

Disc mowers

Drum mowers

Combined mowers

The production process

The production process begins with in-house design of the mower which takes account of specific market requirements. In the production department a prototype of the product is built, which is tested and then modified accordingly.

Quality and control are our strengths

The semi-finished products used in construction of the mowers are processed in-house: the various components are turned, welded and painted, and then assembled and mounted to obtain the end product.
